

RAIN SPA ENVIRONMENTAL POLICY

Rain S.p.A. has been working to maintain and care for plant life since 1968.

In 2021, Rain S.p.A. adopted a new mission statement: 'Together, We Value Resources through Innovation'. With this in mind, every new initiative is evaluated and adopted.

In this respect, environmental protection and the search for environmentally friendly solutions in the conduct of business and in the development of new products play a major role.

The Environmental Policy document establishes guiding principles defined as commitments in which the management emphasises the company's intentions to support and improve its environmental performance, thus putting its mission into practice.

The commitment to safeguarding resources, be they human, natural or energy, can be summarised in the following elements, which, besides being appropriate to the company's aims and context, constitute a framework of reference for the objectives that the company intends to fulfil, increase and disseminate.

These guidelines for continuous improvement are:

1. Compliance with environmental laws and regulations.
2. Developing products that have a positive impact in terms of enhancing environmental resources.
3. In the production process, make the best use of energy resources wherever possible.
4. In the production process, with regard to the chemicals required for production activities, choose, whenever possible, those that are least hazardous to people and the environment, and handle them in an environmentally and human-friendly manner.
5. Pay attention to the environmental demands and requirements of the customer and the market.
6. Involve staff in the development of the above guidelines.

Rain S.p.A.'s Environmental Policy is therefore oriented towards the prevention of all kinds of waste and pollution, it represents a guide for continuous improvement and defines a framework for management review of the initiatives and objectives achieved.

This review will take place at least once a year.
